PROFESSIONAL SUMMARY

Frontend Engineer with 2.5 years building production React.js, Next.js and TypeScript apps. Senior of three frontend engineers on Phrontier AI, an AI hiring platform by Profolo Talent Solutions: built auth, deploy-safe sessions, real-time chat and a streaming AI copilot, reviewed two juniors' code and shipped weekly releases. Also built and launched Sameward, a full-stack product, solo.

PROFESSIONAL EXPERIENCE

Frontend Engineer | Profolo Talent Solutions

01/2025 - 07/2026

Hyderabad, India (in office) · Phrontier AI, an AI hiring platform (Candidate and Employer apps)

- Senior of three frontend engineers on two Next.js apps; turned Figma designs into accessible, responsive UI and set up the feature-based structure, shared form components and 15+ module docs.
- Built auth for three user roles: email and Google OAuth, OTP, HttpOnly cookie sessions, route guards and cross-tab logout.
- Stopped users being logged out on every deploy: made the cookie the source of truth, retried transient failures with backoff, logged out only on 401/403, and added stale-tab recovery via build-ID checks; documented the fix for the team.
- Built the real-time frontend for the ATS Copilot, an AI recruiting assistant: streamed WebSocket responses rendered as markdown, @mentions, and action widgets to compare candidates, move pipeline stages and schedule interviews.
- Built real-time chat, an optimistic-update feed and URL-synced global search with RTK Query over GraphQL and custom React hooks.
- Kept heavy screens fast with Next.js SSR and Server Components, code splitting, lazy loading and memoization.
- Reviewed two juniors' PRs, wrote Jest and React Testing Library unit tests, and shipped weekly CI/CD releases via QA and staging.

Frontend Developer | Innoclique Cognitive Technologies

08/2024 - 12/2024

Hyderabad, India (in office) · Deployed to Profolo Talent Solutions to build the Phrontier AI MVP

- Built the Phrontier AI MVP (v1) in Next.js: auth, user profiles, employer job CRUD, and candidate job browsing and detail views.
- Rebuilt core flows through several product redesigns; this MVP became the base of the v2 platform I later led at Profolo.

Frontend Developer | Codegene

02/2024 - 07/2024

Hyderabad, India (HITEC City, in office) · Top Wallet (topwallet.ph), a live consumer wallet app

- Built complex, reusable React components for Top Wallet's production app, including a WhatsApp-style chat composer with drag-and-drop image attachments, touch-friendly sliders and fully responsive screens; managed shared state with Redux.
- Implemented CryptoJS encryption and decryption of REST API payloads, matching the backend's scheme in both directions.
- Replaced hard-coded config with data-driven config so content changed without code edits; tested across browsers and devices.

PROJECTS

Sameward | Independent Product Engineer

08/2026 - Present

Live product · Next.js · TypeScript · Node.js · Socket.IO · MongoDB · OpenAI · Railway · **sameward.com**

- Solo-built and launched a chat, files and AI workspace as two services: a REST API on Next.js Route Handlers (source of truth) and a Node.js Socket.IO broadcast service, linked by a shared-secret internal endpoint.
- Built auth: HttpOnly cookie sessions, bcrypt hashing, SHA-256-hashed tokens, Google OAuth and role-based access control.
- Built a Channel AI assistant on the OpenAI API that summarizes threads, answers questions and drafts replies to send.
- Deployed both services on Railway with AWS S3 presigned uploads and Resend email; tested every release manually end to end.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript (ES6+), TypeScript, React.js, Next.js (SSR, Server Components), React Hooks, HTML5, CSS3

UI & Styling: Tailwind CSS, shadcn/ui, Material UI, responsive design, accessibility (ARIA, keyboard navigation), Figma

State, Data & Forms: Redux Toolkit, RTK Query, Redux Persist, GraphQL, REST APIs, Axios, React Hook Form, Zod

Real-time & AI: WebSockets, Socket.IO, streaming UI, OpenAI API

Backend: Node.js, Express.js, Next.js Route Handlers and Server Actions, MongoDB, PostgreSQL (Supabase), SQL

Auth & Security: OAuth (Google), HttpOnly cookie sessions, RBAC, Postgres Row-Level Security, bcrypt, CryptoJS

Testing & Performance: Jest, React Testing Library, Vitest, code splitting, lazy loading, memoization

Tools & Process: Git and GitHub (version control), CI/CD, Vercel, Railway, AWS S3, Cursor, Claude, Agile/Scrum, code reviews

EDUCATION & CERTIFICATIONS

BBA, Marketing and Finance · Andhra University · 08/2020 - 07/2023 · CGPA 8.0/10

Edureka Super Intern, Best Performance · Full-Stack Web Development Internship · 05/2023 - 01/2024 · ID L2XLAL6JC
